Art Unit: 1647

Response to Amendment

- 1. The amendment filed 11-17-03 has been entered into the record and has been fully considered.
- 2. Applicants have brought to the attention of the Examiner the amendment of 10-31-02 which was missing from the record at the time of first action. The amendment of 10-31-02 has now been entered into the record and has been fully considered. In light of the incompleteness of the first action due to the second preliminary amendment being lost in the mail, the instant action is Non-Final.
- 3. The text of Title 35 of the U.S. Code not reiterated herein can be found in the previous office action.
- 4. As a result of applicants amendment, all rejections not reiterated herein have been withdrawn by the examiner.

Claim Rejections - 35 USC § 112

- 5. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 6. Claims 13-22 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The specification describes a polynucleotide sequence consisting of SEQ ID

Application/Control Number: 09/910,757

Art Unit: 1647

NO:1, which functions as a translation enhancer. Applicants describe a system for linking DNA sequences encoding peptides or proteins to analys changes in translational exprssion. However, the claims are directed to a "gene" which encompasses various non-encoding sequences where no "gene" is described within the specification. A genus claim may be supported by a representative number of species as set forth in *Regents of the University of California v Eli Lilly & Co,* 119F3d 1559, 1569, 43 USPQ2d 1398, 1406 (Fed. Cir. 1997), which states:

"To fulfill the written description requirement, a patent specification must describe an invention and do so in sufficient detail that one skilled in the art can clearly conclude that "the inventor invented the claimed invention". Lockwood v. American Airlines, Inc., 107 F.3d 1565, 1572, 41 USPQ2d 1961, 1966 (1997); In re Gosteli, 872 F.2d 1008, 1012, 10 USPQ2d 1614, 1618 (Fed. Cir. 1980) ("[T]he description must clearly allow persons of ordinary skill in the art to recognize that [the inventor] invented what is claimed.") Thus, an applicant complies with the written description requirement "by describing the invention, with all its claimed limitations, not that which makes it obvious," and by using "such descriptive means as words, structures, figures, diagrams, formulas, etc., that set forth the claimed invention." Lockwood, 107 F.3d 1565, 1572, 41 USPQ2d at 1966.

An adequate written description of a DNA, such as the cDNA of the recombinant plasmids and microorganisms of the '525 patent, "requires a precise definition, such as by structure, formula, chemical name, or physical properties," not a mere wish or plan for obtaining the claimed chemical invention. Fiers v. Revel, 984 F.2d 1164, 1171, 25

Application/Control Number: 09/910,757

Art Unit: 1647

USPQ2d 1601, 1606 (Fed. Cir. 1993). Accordingly, "an adequate written description of a DNA requires more than a mere statement that it is part of the invention and reference to a potential method for isolating it; what is required is a description of the DNA itself."

Id at 1170, 25 USPQ2d at 1606."

Given the fact that the specification fails to provide objective evidence of any sequences corresponding to description of a gene, it cannot be established that a representative number of species have been disclosed to support the claim. Thus, the specification lacks adequate written description support.

Claim Rejections - 35 USC § 112

- 7. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 8. Claims 13-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 13 recites the limitation "said gene" where no description of a gene exists prior. There is insufficient antecedent basis for this limitation in the claim. It is further noted that claims 14 expressly recites "said gene".

Claim 20 apparently further limits element 13 a) reciting "a peptide or protein". However, the claim recites the terms in opposite order while the claim also previously recites the human amyloid precursor protein. While it appears that applicants are further limiting element 13 a) such will be clarified by presenting the elements in the

Art Unit: 1647

same order. If alternatively, applicant intends to further limit the amyloid precursor protein such should be clearly specified by providing clear antecedent basis to the full term.

Status of Claims

No claims are allowed.

Conclusion

10. Any inquiry of a general nature or relating to the status of this general application should be directed to the Group receptionist whose telephone number is (703) 308-0196.

Papers relating to this application may be submitted to Technology Center 1600, Group 1640 by facsimile transmission. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). Should applicant wish to FAX a response, the current FAX number for Group 1600 is (703) 872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sharon L. Turner, Ph.D. whose telephone number is (571) 272-0894. The examiner can normally be reached on Monday-Friday from 8:00 AM to 4:30 PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Kunz can be reached at (571) 272-0887.

Sharon L. Turner, Ph.D.
